WELCOME!

This report focuses on the sales performance of summer-themed products on wish.com. Summer clothes are defined here as clothing items stored under the theme "Summer".

The report is based on data of item prices, merchants, units sold, and ratings. The purpose of this report is to provide insights into the sales of summer items, and what to focus on to improve business performance.

The dataset used is a list of summer products and relevant information, such as price, color, units sold, rating, and merchant rating.

The custom variable "**Revenue**" was created by calculating **price * units_sold**, to be able to analyze the revenue brought in by the product. This information is used to find which products and merchants are the most profitable.

8.40€
AVG PRICE

There is no significant difference between urgent and non-urgent products, since products with an urgency banner are on average **0.94% less expensive** than those without.

KEY INSIGHTS

- ➡ A high number of merchants vs. a low number of products per merchant means **strong competition but limited product range**. Merchants could offer more products to increase revenue.
- ➡ A large share of total revenue is driven by a few low-priced items, which means **volume selling is the main revenue driver**.
- ➡ Size and color trends can influence sales and **focusing on popular colors can improve sales performance**.
- ➡ Product features like badges can increase perceived value – **adding badges to more products can increase revenue**.
- ➡ **Urgency banners have little effect** on customer decisions.

Revenue growth opportunities are found in **increasing product variety per merchant**, focusing on sizes and colors with **high demand**, and using **value-adding features** such as fast shipping and quality badges.
